

# Release 6.0

[https://documentation.dcr.design/release\\_notes/release-6-0/](https://documentation.dcr.design/release_notes/release-6-0/)

- Process Intelligence
  - Ability to view only insight activities (107505)
- [Process Discovery](#)
  - Added more advanced algorithms so we now also mine Forbidden flows
- Easier sharing of DCR Process Models with co-workers
  - Global categories shared with everybody within your organization
  - Public DCR Process Models will be discontinued in Community organizations (116151)
- DCR Compliance Engine
  - Improvement and more consistent use of DCR Compliance Engine in the portal
  - Verification in specific flow (swimlane/scenario) and all flows now use exactly the same verification logic
  - Detailed information about the issue can be viewed on the dashboard
- [DCR Whiteboard](#)
  - Default type of *nesting* changed from Nesting to Subprocess (5915)
- DCR Flow Editor
  - Various UI improvements, easier to add roles and activities, easier to validate traces (114765)
  - Ability to edit duration (113881) - PENDING
- Introduced Teams in Portal (5916)
- Ability to only show models in category outside category flag (116150)
- DCR Compliance Engine now being used to re-run flows (111311, 5758, 111320)
- Process Engine upgraded to version 3.3.9
- Improvement of on-boarding for new users Introduction mail will now be sent when people sign up - all controlled by a DCR Process Model naturally
  - New users get their own first DCR Process Model - a simple expense report - to play with
  - Ability to capture Portal events (116263)
  - Using @instanceId as parameter in User Experience SQL SP (116428)
- Other Improvements:
  - REFERID been replaced with FRAGMENTID (5979)
  - Rules updated to proper names (116149)
  - Updates in import/export DCR XML Log (112642)
  - Updated icons for Shared and/or Public categories (113943)
  - Show text instead of smileys in Simulations list (117055)
  - Ability to only show most common path initially in Path History (114012)
  - Ability to register origin when new users registers themselves (6106)
  - Ability to check re-run File Upload flow in Path History (5725)
  - Exception handling on Revision wizard
- Bug Fixes:
  - Fixed: Exception in DCRDiff function in Process Engine
  - Fixed: Lazy user in simulation does not save role in DL\_SimulationLog table
  - Fixed: Events are importing wrongly on Import flows in Designer
  - Fixed: Percentage is importing/exporting as Integer and not as decimal
  - Fixed: Extend account page is not showing if account is expired and we access tool page
  - Fixed: Localization issues
  - Fixed: Admin dashboard does load
  - Fixed: Email issues related to invite users to organization

- Fixed: Network call for notification should not happen on closing notifications pop-up
- Fixed: Ordering of events not working if grouped and Sequence is checked
- Fixed: Value field goes missing for custom validation
- Fixed: Format problem in custom validation for Date/DateTime fields
- Fixed: Calendar not opening on editing custom validation for Date/DateTime fields
- Fixed: Error in console on opening form/data event
- Fixed: Value is executing automatically in DateTime field in Portal Form server
- Fixed: 2 organizations are setting as Primary upon registration
- Fixed: Created is empty while editing flow in Flow Editor
- Fixed: User experience related errors
- Fixed: Add a new activity and drag in Swimlanes not working

One highlights line : DCR Process Intelligence lets you identify bottlenecks, compliance and response times

Two highlights line : Easier to collaborate with co-workers in global categories

Three highlights line : Welcome Teams to make collaboration easier

Release Date : January 19, 2021

Demo release date : December 24, 2020
