

# WZ.ValidateEntities

<https://documentation.dcr.design/example/wz-validateentities/>

First the user fill out the input form with Case.ID and State.Then WZ.Validateentities is invoked by the robot. It returns true or false if correct or not. The user can inspect the value.

Notice: In order to simulate this example you need to make a copy of the graph and move it to your own organization, and ensure that the [WorkZone dynamic effect package](#) is configured for your organization.
