

# Release 4.8

[https://documentation.dcr.design/release\\_notes/release-4-8/](https://documentation.dcr.design/release_notes/release-4-8/)

## Portal

- New Features:
  - Support for Duration in Delay/Deadline
- Improvements:
  - Process Engine upgraded to version 2.18.1 patch that has various improvements
  - Fast loading of connections listing
  - [No-Response UI updates in DCR Whiteboard](#)
  - In [DCR AI Guide next step](#) section, show Title of activity instead of ID
  - Improved calculation for DCR AI Guide
  - Analyze instances works w.r.t user's local time
  - Export scenarios/simulation - also return created + last modified date + created/modified by
  - Updated design for social registration page
- Bugs Fixes:
  - Fixed: Search not working for Connections and Recent Processes on Dashboard
  - Fixed: Categories not showing on Dashboard if we rename collection with special characters
  - Fixed: Error if we use danish characters in username while registration
  - Fixed: Error in console on Extend Account page
  - Fixed: Filtered roles are not clearing properly in Activities section on Dashboard
  - Fixed: Error in console if we click on some recent process or some category
  - Fixed: English value is showing instead of Danish in Swimlanes editor
  - Fixed: DCR Publisher: Scenarios missing from document
  - Fixed: Re-run of scenario fails after export-import
  - Fixed: Save button layout in App store
  - Fixed: On updating some app, value of [AddToAllUsers] sets to Null, it must retain its value
  - Fixed: Pre-set list has duplicate empty values in Form server
  - Fixed: Remove capitalize from notification text
  - Fixed: Analyze simulation not working for particular processes
  - Fixed: Error message needs to be changed if re-run for all scenarios fails
  - Fixed: Date picker does not work in Sequence Editor in vertical layout
  - Error logging has been added for Swimlane

## [DCR Simulator](#)

- Improvements:
  - Block user - if leave the simulation
- Bugs Fixes:
  - Fixed: If no simulation exists, then redirect to 'root'

## [Highlighter](#)

- New Features:
  - Ability to assign activities to roles by selecting Activity
  - Show summary of retrieved suggestions when the NLP services is called

- If suggested activity contains a subject, use it as a role
- Size modifier for the controller
- Improvements:
  - Updated helper text for top navigation bar
  - Alias drop-down gets updated every time the user creates an element (role, activity, rule)
  - Type of rule should be check-box instead of radio control to create multiple at a time
  - Improved Alias For list while creating a suggested alias
- Bugs Fixes:
  - Fixed: List in app not refreshing automatically for roles and rules created/deleted from process
  - Fixed: Creating rules using all instances options
  - Fixed: New rules cannot be merged with highlighted rules
  - Fixed: Arrow is missing for suggestion tool tip
  - Fixed: Suggestions must not be shown for commented text
  - Fixed: Tool tip is missing on Suggest button
  - Fixed: Activity label is not updating in editor unless we reload
  - Fixed: Suggested items count is not showing fine
  - Fixed: Show only Activities/Roles/Rules functionality is not working

Release Date : December 19, 2019
